

5-MINUTE SPEAKING / OUTPUT TASK

Your role: Propose a sensor-derived endpoint pipeline to an SP lead.

Minute 1: Choose one endpoint.

Minutes 2-3: Define raw input, quality flags, valid days, aggregation and baseline.

Minute 4: Add version, timezone, missing-data, QC and traceability controls.

Minute 5: State when the endpoint is analysis-ready.

ONE SENTENCE TO KEEP

Continuous data create richer evidence only when the endpoint algorithm, missing-data rules and software lineage are explicit, validated and reproducible.
